

Happy Mouth Pelham straight bar with curb chain.

Description

The mouthpiece cannot pinch or damage the corners of the mouth and is very effective on young horses. Ideally used with double reins - the curb rein, applies poll pressure to lower the horse's head and curb groove pressure to tilt the angle of the nose in towards the chest. The snaffle rein has a more direct contact with the horse's mouth. It can also be used with rein connectors and therefore a single rein.
